

# Activating the 2030 Agenda.

## SDG Lab Toolkit

The SDG Lab Toolkit — [sdglab.ch/toolkit](http://sdglab.ch/toolkit) — provides insight into the methods, tools and techniques that have been tried and tested since the Lab's founding in 2017.

A living document, the toolkit was developed in response to many requests for a 'how-to' guide on replicating the Lab model; a demand that came from governments and organizations alike in their quest to support the implementation of the 2030 Agenda.

The toolkit has been created to be highly accessible and designed to support a range of actors, regardless of expertise, experience and knowledge of working and innovating in a collaborative way.

## SDG Lab Toolkit at a Glance

The toolkit is structured into four sections:

### 1 - Tips for building your own SDG Lab inspired initiative:

This section includes seven clusters of top tips that should be taken into account when building a lab from scratch.

### 2 - Tools:

This is the bulk of the kit, containing a series of tools that have been tested and iterated on since the Lab's founding. They are grouped according to the Lab's four areas of work: Connect, Amplify, Ask Questions and Innovate. Eleven tools are currently included; additional ones will be added as they are ready.

### 3 - Co-Creation:

This section outlines the principles of convening, engaging and working in the SDG era; points that are essential for fruitful collaboration.

### 4 - Additional resources from the Geneva Ecosystem:

This last section features additional methods, tools and techniques that can support governments, organizations and other entities in advancing the 2030 Agenda.
